

Incident Response Plan

Policy Owner: Mack Myers

Effective Date: January 1, 2023

Purpose

This document establishes the plan for managing information security incidents and events, and offers guidance for employees or incident responders who believe they have discovered, or are responding to, a security incident.

Scope

This policy covers all information security or data privacy events or incidents.

Incident and Event Definitions

A security event is an observable occurrence relevant to the confidentiality, availability, integrity, or privacy of company controlled data, systems or networks.

A security incident is a security event which results in loss or damage to the confidentiality, availability, integrity, or privacy of company controlled data, systems or networks.

Incident Reporting & Documentation

Reporting

If a Mesh Intelligent Technologies, Inc. employee, contractor, user, or customer becomes aware of an information security event or incident, possible incident, imminent incident, unauthorized access, policy violation, security weakness, or suspicious activity, then they shall immediately report the information using one of the following communication channels:

- Email support@pieces.app with information or reports about the event or incident

Reporters should act as a good witness and behave as if they are reporting a crime. Reports should include specific details about what has been observed or discovered.

Severity

Mesh Intelligent Technologies, Inc. IT Team shall monitor incident and event tickets and shall assign a ticket severity based on the following categories.

S3/S4 - Low and Medium Severity

Issues meeting this severity are simply suspicions or odd behaviors. They are not verified and require further investigation. There is no clear indicator that systems have tangible risk and do not require emergency response. This includes lost/stolen laptop with disk encryption, suspicious emails, outages, strange activity on a laptop, etc.

S2 - High Severity

High severity issues relate to problems where an adversary or active exploitation hasn't been proven yet, and may not have happened, but is likely to happen. This may include lost/stolen laptop without encryption, vulnerabilities with direct risk of exploitation, threats with risk or adversarial persistence on our systems (e.g.: backdoors, malware), malicious access of business data (e.g.: passwords, vulnerability data, payments information).

S1 - Critical Severity

Critical issues relate to actively exploited risks and involve a malicious actor or threats that put any individual at risk of physical harm. Identification of active exploitation is required to meet this severity category.

Escalation and Internal Reporting

The incident escalation contacts can be found below in Appendix A.

S1 - Critical Severity: S1 issues require immediate notification to Engineering management.

S2 - High Severity: A support ticket must be completed and the appropriate manager (see S1 above) must also be notified via GChat with a reference to the ticket number.

S3/S4 - Medium and Low Severity: A support ticket must be created and assigned to the appropriate department for response.

Documentation

All reported security events, incidents, and response activities shall be documented and adequately protected in GitHub Issues.

A root cause analysis may be performed on all verified S1 security incidents. A root cause analysis report shall be documented and referenced in the incident ticket. The root cause analysis shall be reviewed by the Director of Engineering who shall determine if a post-mortem meeting will be called.

Incident Response Process

For critical issues, the response team will follow an iterative response process designed to investigate, contain exploitation, eradicate the threat, recover system and services, remediate vulnerabilities, and document a post-mortem report including the lessons learned from the incident.

Summary

- Event reported
- Triage and analysis
- Investigation
- Containment & neutralization (short term/triage)
- Recovery & vulnerability remediation
- Hardening & Detection improvements (lessons learned, long term response)

Detailed

- IT Manager or VP of Support will manage the incident response effort
- If necessary, a central "War Room" will be designated, which may be a physical or virtual location (e.g., Google Chat Space)
- A recurring Incident Response Meeting will occur at regular intervals until the incident is resolved
- Legal and executive staff will be informed as required

Internal Communications

- IT Manager or VP of Support will report the incident to legal and executive staff as required
- The Incident Response Team will deliver appropriate notifications to personnel and affected departments
- The VP of Support or CEO will notify users, customers, law enforcement, and other third-parties as necessary and in line with the requirements listed in External Communications and Breach Reporting

Incident Response Meeting Agenda

- Update Incident Ticket and timelines
- Document new Indicators of Compromise (IOCs)
- Perform investigative Q&A
- Apply emergency mitigations
- External Reporting / Breach Reporting
- Plan long term mitigations
- Document Root Cause Analysis (RCA)
- Additional items as needed

Special Considerations

Internal Issues

Issues where the malicious actor is an internal employee, contractor, vendor, or partner requires sensitive handling. The incident manager shall contact the CEO directly and will not discuss with other employees. These are critical issues where follow-up must occur.

Compromised Communications

Incident responders must have Google Chat arranged before listing themselves as incident members. If there are IT communication risks, an out of band solution will be chosen and communicated to incident responders via cell phone.

Root Account Compromise

If a Google Cloud root account compromise is known or expected, refer to the playbook in Appendix D.

Additional Requirements

- Suspected and reported events and incidents shall be documented
- Suspected incidents shall be assessed and classified as either an event or an incident
- Incident response shall be performed according to this plan and any associated procedures.
- All incidents shall be formally documented, and a documented root cause analysis shall be performed
- Incident responders shall collect, store, and preserve incident-related evidence in accordance with industry guidance and best practices such as NIST SP 800-86 'Guide to Integrating Forensic Techniques into Incident Response'
- Suspected and confirmed unauthorized access events shall be reviewed by the Incident Response Team. Breach determinations shall only be made by the CEO and legal counsel in coordination with executive management.
- Mesh Intelligent Technologies, Inc. shall promptly and properly notify customers, partners, users, affected parties, and regulatory agencies of relevant incidents or breaches in accordance with Mesh Intelligent Technologies, Inc. policies, contractual commitments, and regulatory requirements, as determined by the CEO.

- This Incident Response Plan shall be reviewed and formally tested at least annually. Results of IR plan testing activities including findings and lessons learned will be formally documented and maintained to support security, compliance and audit requirements

External Communications and Breach Reporting

Legal and executive staff shall confer with technical teams in the event of unauthorized access to company or customer systems, networks, and/or data. Legal staff along with the CEO shall determine if breach reporting or external communications are required. If external communications are required, breaches shall be reported to customers, consumers, data subjects and regulators without undue delay and in accordance with all contractual commitments and applicable legislation. The following notification table identifies entities and timelines for notifications.

Who	Contact Method	When
ICO (GDPR)	https://ico.org.uk/for-organisations/report-a-breach	Within 72 hours
Users	E-mail	Once data at risk and impacted users have been identified
Customers	E-mail	Once data at risk and impacted customers have been identified
Press	According to legal and executive staff decision	According to legal and executive staff decision
Law Enforcement	Telephone	As soon as possible once criminal activity is suspected

No personnel may disclose information regarding incident or potential breaches to any third party or unauthorized person, including the media, without the approval of legal and/or executive management.

Mitigation and Remediation

Legal and executive staff shall determine any immediate or long term mitigations or remedial actions that need to be taken as a result of an incident or breach. In the event that mitigations or remedial actions are needed, executive staff shall direct personnel with respect to planning, communicating and executing those activities.

Cooperation with Customers, Data Controller and Authorities

As needed and determined by legal and executive staff, the company shall cooperate with customers, Data Controllers and regulators to fulfill all of its obligations in the event of an incident or data breach.

Roles & Responsibilities

Every employee and user of any Mesh Intelligent Technologies, Inc. information resources has responsibilities toward the protection of the information assets. The table below establishes the specific responsibilities of the incident responder roles.

Response Team Members

Role	Responsibility
Incident Manager	<p>The Incident Manager is the primary and ultimate decision maker during the response period. The Incident Manager is ultimately responsible for resolving the incident and formally closing incident response actions. See Appendix A for Incident Manager contact information.</p> <p>These responsibilities include:</p> <ul style="list-style-type: none"> • Ensuring the right people from all functions are actively involved as appropriate • Communicating status updates to the appropriate person or teams at regular intervals • Resolving incidents in the immediate term • Determining necessary follow-up actions • Assigning follow-up activities to the appropriate people • Promptly reporting incident details which may trigger breach reporting, in writing to the Director of Engineering
Incident Response Team (IRT)	The individuals who have been engaged and are actively working on the incident. All members of the IRT will remain engaged in incident response until the incident is formally resolved, or they are formally dismissed by the Incident Manager.
Engineers (Support and Development)	Qualified engineers will be placed into the on-call rotation and may act as the Incident Manager (if primary resources are not available) or a member of the IRT when engaged to respond to an incident. Engineers are responsible for understanding the technologies and components of the information systems, the security controls in place including logging, monitoring, and alerting tools, appropriate communications channels, incident response protocols, escalation procedures, and documentation requirements. When Engineers are engaged in incident response, they become members of the IRT.
Users	Employees and contractors of Mesh Intelligent Technologies, Inc.. Users are responsible for following policies, reporting problems, suspected problems, weaknesses, suspicious activity, and security incidents and events.
Customers	Customers are responsible for reporting problems with their use of Mesh Intelligent Technologies, Inc. services. Customers are responsible for verifying that reported problems are resolved.
Legal Counsel	Responsible, in conjunction with the CEO and executive management, for determining if an incident presents legal or regulatory exposure as well as whether an incident shall be considered a reportable breach. Counsel shall review and approve in writing all external breach notices before they are sent to any external party.
Executive Management	<p>Responsible, in conjunction with the CEO and Legal Counsel, for determining if an incident shall be considered a reportable breach. An appropriate company officer shall review and approve in writing all external breach notices before they are sent to any external party.</p> <p>Mesh Intelligent Technologies, Inc. shall seek stakeholder consensus when determining whether a breach has occurred. The Mesh Intelligent Technologies, Inc. CEO shall make a final breach determination in the event that consensus cannot be reached.</p>

Management Commitment

Mesh Intelligent Technologies, Inc. management has approved this policy and commits to

providing the resources, tools and training needed to reasonably respond to identified security events and incidents with the potential to adversely affect the company or its customers.

Exceptions

Requests for an exception to this Policy must be submitted to and authorized by the IT Manager for approval. Exceptions shall be documented.

Violations & Enforcement

Any known violations of this policy should be reported to the CEO. Violations of this policy may result in immediate withdrawal or suspension of system and network privileges and/or disciplinary action in accordance with company procedures up to and including termination of employment.

Incident Summary				
Type of Incident Detected:				
Denial of Service	Unauthorized Use	Espionage	Probe	Hoax
Malicious Code	Unauthorized Access	Other:		
Incident Location:				
Site:				
Site Point of Contact:				
Phone:				
Email:				
How was the Incident Detected:				
Additional Information:				

Location(s) of affected systems:				
Date and time incident handlers arrived at site:				
Describe affected information system(s) (one form per system is recommended):				
Hardware Manufacturer:				
Serial Number:				
Corporate Property Number (if applicable):				
Is the affected system connected to a network?	Yes	No		
Describe the physical security of the location of affected information systems (locks, security alarms, building access, etc.):				
Isolate affected systems:				
Approval to removal from network?	Yes	No		
If YES, Name of Approver:				
Date and Time Removed:				
If NO, state the reason:				
Backup of Affected System(s):				
Last System backup successful?	Yes	No		
Name of persons who did backup:				
Date and time last backups started:				
Date and time last backups completed:				
Backup Storage Location:				
Incident Eradication:				
Name of persons performing forensics:				
Was the vulnerability (root cause) identified:	Yes	No		
Describe:				
How was eradication validated:
